DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the pump, engine, discharge valve, foam tank, foam tank proportioner, hydraulic pump, leveling system, pontoons, and air compressor must be shown (beyond the schematic diagram provided) or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

2. Claims 3, 4, 5, 8, 9, 10, 13, 14, and 15 recite the limitation "The portable fire-fighting container" in line 1 of each claim. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1 and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent 3,084,825 to Hultquist.

The container is functional when the relative orientation of the container is as shown in Figure 7 and 8 or as viewed with the wall (wall nearest reference numbers 22,24,26 of Figure 7) oriented as the bottom wall. In such orientation the container has opposite end walls, a bottom connected between the end walls, opposite side walls (36, 12), expandable seals (12,24,26,32) connecting the side walls to the end walls and the bottom, and actuators (76,74,82,88,90,84) connected to the side walls and the arranged to retract the side walls inwardly to reduce container width, and to expand the side walls outwardly to increase container capacity. Furthermore, Hultquist discloses that the container can also use bellows. See column 1, lines 35 to 39.

Allowable Subject Matter

5. Claims 6 and 7 are allowed.
6. Claims 2 and 12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
7. Claims 3-5, 8-10, and 13-15 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patent No. 5,263,601 to Borow discloses an upwardly expandable cargo container having a fluid filled bag surrounded by rigid walls. U.S. Patent No. 6,158,521 to Klump discloses the combination of a portable fire-fighting device with an engine, pump, foam tank, foam proportioner, valves, and leveling system. U.S. patent No. 2,952,379 to Potter discloses an upwardly expandable bellow surrounded by a collapsible container. U.S. Patent No. 4,214,721 to Burhans discloses an upwardly expandable fluid bag surrounded by a collapsible container. U.S. Patent No. 5,052,319 to Beyrouthy discloses a portable one million capacity upwardly expanding bellows. U.S. Patent No. 3,661,211 to Powers discloses an upwardly expandable bag surrounded by a collapsible container. U.S. Patent No. 3,474,844 to Lindstrom discloses an upwardly expanding bellows container. U.S. Patent No. 3,527,339 to

Cipolla discloses a sideways expanding container. U.S. Patent No. 3,088,771 to Weigle discloses a bellows container that expands sideways.
